2. Roll the strip of paper around your cylindrical object. Adjust so the uncreased edge extends a generous inch beyond the bottom of the cylinder.

1. Cut newspaper into 4 to 5 inch strips. Fold about one inch of the strip on the long side. Crease and unfold.

3. Fold opposite sides of the paper flat over the bottom of the cylinder. Then fold the other two sides over and crease well.

4. Remove the paper from the cylinder. If the pot is too tall, trim off excess.

NEWSPAPER METHOD

WHAT YOU’LL NEED:
• Newspaper
• Cylindrical object about 1 to 2 inches in diameter (skinny bottle/jar/paper towel roll, etc.)
• Scissors
• Soil
• Seeds
1. Make four one-inch cuts an equal distance apart on one end of the cardboard roll. This will result in four flaps.

2. Fold the flaps over to create the bottom of the pot. To make a sturdier pot, fold and crease each flap individually, then fold them over each other.

3. Trim excess so that your pot is about 2 to 3 inches tall.

4. Fill with soil, leaving about ½ inch of space from the top.

5. Set flat and fold the pre-creased top edge inward to create a sturdy rim. Fill with soil, leaving about ½ inch of space from the top.

**PAPER TOWEL ROLL METHOD**

**WHAT YOU’LL NEED:**
- Toilet paper roll or paper towel roll cut in half
- Scissors
- Soil
- Seeds

When the seedling is ready to be transplanted, dig a hole the same depth as the pot. If using a paper towel roll pot, poke holes in the cardboard or simply cut the roll off entirely. Newspaper pots may be planted directly into the soil. Fill in soil around the seedling and a little bit over. Water thoroughly!

**Plant your seeds according to planting instructions. Place the pot on a waterproof tray, plate, or other surface. Keep moist.**

**THEN**
